# 1 OVERRIDING ACTIVITY PARAMETER AT RUN TIME

This section explains how to override the parameter of any activity at run time. For example *To* field of *Mail Notification* activity.

## **Steps to override "To" field of Mail Notification activity using put-context-var**

1. Click tree structure in the **Repository View** panel. Expand the **Action** list and select the **put-context-var** action and drag it to the Graph Canvas area before the Mail Notification activity whose "To" field is to be overridden.
2. Connect the *put-context-var* action to the Mail Notification (see Figure 1.1).

**Figure 1.1: Connect put-context-var to Mail Notification**

3. Right-click **put-context-var** and select **View Properties**. Its properties are displayed in the Properties Panel in the Bottom Pane (Figure 1.2).

**Figure 1.2: Properties of Put-context-var**

4. Click **Edit** button to edit the value of context variable. The (Figure 1.3) dialog box is displayed.

**Figure 1.3: Edit Context Variable**

5. Click **Add Variable** (  ) to add new context variable. The [Context Variable Information](#) screen is displayed.
6. Select the activity, whose parameter is to be overridden (for example, EvalRec\_MailNotification) from *Activity Name* drop-down list. All variables of this task are listed in the Variable Name drop-down list.
7. Select **receiverEmailIds** from *Variable Name* drop-down list.
8. Enter the email address to which you want send the notification, in the *Variable Value* field. You can also define the email address as extracted from a variable, by entering \$\$ variable name \$\$ in the *Variable Value* field.

The entered information is displayed as shown in Figure 1.4.

The image shows a dialog box titled "Context Variable Information". It has three input fields: "Activity Name" with a dropdown menu showing "EvalRec\_MailNotification", "Variable Name" with a dropdown menu showing "receiverEmailIds", and "Variable Value" with a text box containing "support@adeptia.com". At the bottom right, there are two buttons: "Done" and "Cancel".

**Figure 1.4: Context Variable Details for Overriding mail address**

9. Click **Done** to close Context Variable Information screen. This takes the control back to the **Edit Context variable** screen. The newly created variable is added to the list of existing context variables.
10. Click **Done** to close **Edit Context variable** screen and return to Process Designer.
11. Save the process flow and exit from Process Designer.

Similarly, you can dynamically override the parameter of any activity.
