Migration Utility Stucks While Promotion in
Adeptia Suite v5.3

Issue: Migration Utility stuck while Promoting Export zip to Adeptia Suite 5.3.

Applicable for: This option is applicable with the Migration Utility for Adeptia Suite 5.3.

Prerequisites:

1. Adeptia Suite Services should be started.
2. Access to Adeptia Suite installation directory.
3. Permissions to modify Directories of Adeptia Suite.

Solution:

This issue is in v5.3 because of a new Class imported into the schema activities.

While promoting objects, Migration Utility searches the required jar files in web/libs folder and the jar containing the above mentioned imported class is not present in web/libs folder. So, the problem is due to this missing imported class.

Hence a temporary workaround for this is to place the jar file named "**com.google.gdata.core-1.30.0.jar**" in AdeptiaServer/ServerKernel/web/libs folder. This jar file is present in AdeptiaServer/ServerKernel/libs/frevvo folder of AdeptiaSuite.
