

Steps to point Adeptia Server to use latest JRE

1. Download Jre 1.5.0_12 from http://java.sun.com/products/archive/j2se/5.0_12/index.html
2. Install it.
3. Open *application.bat* file from *./AdeptiaServer-4.8/SeverKernel/* folder.
4. Replace the path of the JRE with path of the Jre 1.5.0_12 that you have installed. For example if you have installed the jre in **C:\Program Files\Java\jre1.5.0_012** the path would be **C:\Program Files\Java\jre1.5.0_12\bin**. (See figure below).

```
SET PATH=C:\Program Files\Java\jre1.5.0_12\bin
@ECHO OFF
REM ---- To add system classpath, append ;%CLASSPATH% at the
@ECHO ON
SET CLASSPATH=.;%CLASSPATH%;etc\;web\libs\BPMServer.jar;

@echo LAUNCHER CLASSPATH %CLASSPATH%
java -version

@ECHO OFF
IF "%1"==" " GOTO LAUNCHER
IF "%1"=="CL" GOTO LAUNCHER
IF "%1"=="CA" GOTO LAUNCHER
IF "%1"=="KN" GOTO LAUNCHER
IF "%1"=="WB" GOTO LAUNCHER
```

5. Resart Kernel and WebRunner.
