Steps to Migrate globalTemplate and valueMap

**Issue**: globalTemplate and valueMap won't be migrated in the Process flow migration zip

Applicable for: This option is applicable for all the versions above Adeptia Suite 5.0.

Prerequisites:

1. User should have full access to the Adeptia Suite Installation Directory both Source and Target.
2. Process flow zip with the corresponding Data Mapping (globalTemplate and valueMap) should be deployed initially (Before following the steps below).

Solution:

1. Stop Adeptia Suite Services.
2. Goto **\AdeptiaSuiteInstallationDirectory\AdeptiaServer-5.*\ServerKernel\web\applets\mapping.**
3. You will see the folders globalTemplate and valueMap. Copy the corresponding globalTemplate and valueMap elements from their respective folders and paste them at the same path of the Target Build.

4. Restart Adeptia Suite Services of the Target build.
5. To verify open Adeptia Suite Data Mapper and cross check if the globalTemplate and valueMap are available there.
